

## Appendix G

### Low Carbon Alternative Fuels

2025 WA IRP

## **Appendix G – Introduction**

The purpose of this document is to present data used by Cascades low carbon alternative fuels, the stochastic inputs, and the documentation from ICF on their analysis. The presentation of data in this format allows for the transparent review of some of the inputs and results that are part of the Company's risk modeling. This is ultimately used to complete Cascade's scenario and sensitivity modeling as discussed in the Company's supply resource optimization process in Chapter 9, Resource Integration. Due to the size of the low carbon alternative fuel inputs, Cascade is providing the data in its native format of excel.
